

Question I will answer

SciFair

materials I will use (consumable items)

equipment I need

this is what I think I will do and what
I feel might happen

procedure - step by step set of instructions
for doing my experimentation

step 1- first I

step 2-

data - this is a collection of facts found
through my experimentation.

results

Is your data scattered or fairly consistent?

how do you know?

what does your data suggest?

what are your variables?

what variables did you control in your experiment?
↳ what does this mean?

conclusion

Science fair

what did you discover/find out
because you did this experiment?

What could you have done to make this experiment better?

Is it possible to continue with this project next year?

How or why not?
